

## Solvent Dumping/Dispensing station

The RENZMAN solvent drawing and draining station is used to discharge used solvent or residual ink from small containers like barrels, buckets, canisters or cans. In addition, clean solvent can be filled into small containers. After draining, the buckets, canisters or cans can be cleaned with a cleaning brush (accessory) that is supplied with solvent. An air extraction system protects the operator from solvent vapours. With the solvent dumping and dispensing station, a safe solvent handling is guaranteed.
